RESEARCH INTERESTS

Structured representation learning and world models for dynamic and partially observable environments. I am particularly interested in object-centric and hierarchical representations that maintain persistent state through occlusion and environmental change, supporting prediction, reasoning, and long-horizon decision making for embodied agents.

EDUCATION

University of Arkansas (UARK)
Department of Electrical Engineering and Computer Science
Master of Science in Computer Science — CGPA: 4.00/4.00 — Expected 2027

Vietnam National University Ho Chi Minh City (VNU-HCMC)
University of Information Technology (UIT)
Bachelor of Science in Computer Science — GPA: 9.24/10.0 — Rank: 1st – Valedictorian

EXPERIENCE

University of Arkansas – AICV Lab 2026 – Present

- Proposed a fully self-supervised object-centric video framework that separates per-frame appearance from temporally persistent identity into two slot states, reconciling reconstruction quality with temporal consistency; evaluated on MOVi-C, MOVi-D, and YouTube-VIS (*DSSA*, ACM MM 2026, accepted, co-first author).
- Designed a self-supervised slot-lifecycle mechanism that learns per-slot temporal activation **without visibility supervision**, preserving latent state for absent or fully occluded objects while reducing state drift and decoder interference (*TSA*, under review, co-first author).
- Developed a hierarchical **vision-language-action** framework combining a persistent semantic-graph state with a synthesized code-based planner for non-Markovian long-horizon robot manipulation under partial observability (*CodeGraphVLP*, under review, co-first author).

Day One Company – AI Lab 2024 – 2025

- Proposed a **self-supervised domain adaptation** pipeline enabling OCR models to adapt to new customer domains without additional annotation, reducing onboarding cost by 45%.
- Built information extraction systems that generalized across unseen receipt layouts, increasing end-to-end automation from 60% to 90% and reaching 99% accuracy on fraudulent-field detection.
- Led research, development, deployment, and maintenance of production AI systems, including MLOps pipelines and model monitoring.

University of Information Technology – AI Lab 2021 – 2024

- Developed region-aware pose representations and **signer-invariant** learning strategies for generalization across individuals in signer-independent sign language recognition (2 papers, ICCV Workshop 2025; 2nd place, MSLR Challenge).
- Built multimodal retrieval systems combining vision-language representations (CLIP, BLIP), OCR, ASR, and temporal modeling for search over 300+ hours of video (SOICT 2023, first author).
- Developed object-detection systems for severe class imbalance and adverse visual conditions in real-world traffic footage (CVPR Workshop 2024; 1st place, 8th AI City Challenge).

SELECTED HONORS AND AWARDS

Graduate Assistantship Award, University of Arkansas	2026
2nd Place, Multimodal Sign Language Recognition Challenge, ICCV Workshop	2025
1st Place, 8th AI City Challenge, CVPR Workshop	2024
Valedictorian, Bachelor of Science, UIT	2024
Second Prize, Central-Level Science and Technology Awards	2024
2nd Runner-Up, FPT AI Challenge	2023
